Scene Management	150

How to use this guide!

This guide is designed to aid you in your studies of becoming a paramedic. Its format is designed to be simple and easy to use. The overall format is divided into main subject matters, and then divides into subsections of the main subject into topics. Each main subject starts off with some definitions then breaks down into various topics of the main category. The main subjects will likely correspond with your textbook chapters so that you can easily identify the sections of material you're currently in.

Our recommendation is that you read your assigned textbook first then use the related sections in this guide as a reference to the concepts of the subject matter. This guide serves as a great supplement to your assigned material. It takes a large amount of information and breaks down the principles into manageable sections. This builds on your knowledge of the material covered in class as well as throughout your required text. **DO NOT** use this guide in place of your required textbooks or learning materials, as this will only confuse and frustrate you. **DO NOT** use this guide to cram for an exam or quiz! Cramming serves very little purpose and offers even less retention of the material you attempt to cram. This guide is an excellent reference prior to an exam and will highlight many key points that are likely to show up on the exam. You will only get out what you put into your studying.

Be sure to check out some of our features at the end of the guide. They include: a commonly used acronym list, testing tips, studying tips for your course, as well as a section on triads, syndromes and laws that are commonly mixed up. And lastly, enjoy your info packed guide, may it serve you well, as it has so many others!

Dedication

The credit for the creation of this guide belongs to the great physician himself Jesus Christ. Whose love for his creation- his children- has given them a successful and fruitful platform to proclaim his glory. Jesus Christ has healed more people across the world than any medical doctor, surgeon, nurse or other health practitioner ever commissioned. The miracles that the Lord God has and continues to performed have been completed by his work on Calvary. May the Lord bless your career and educational endeavor; so that others may know that the miracle of Christ lives on through the gospels and those who provide care to others selflessly and diligently!
